## universal investment

100 x 100g

NanoVest Universal Investment is a versatile nitrogen filled investment that can be used with all pressable ceramic systems and casting alloys.

The investment cures quickly but it can achieve great results when using it overnight.

- Fluid consistency for easy investing, smooth surface and no bubbles
- Delivers a consistent, wide range of expansions for an accurate fit
- Advanced formula for added strength
- Minimal to no reaction layer with lithium disilicate

Non Precious Alloys	20 cc Liquid 3 cc Water
Precious / Semi Precious Alloys	16 cc Liquid 7 cc Water
Pressables Crowns/ Onlays / Veneers	15 cc Liquid 8 cc Water
Pressable Inlays	11 cc Liquid 12 cc Water

Nanovest has made my job a lot easier. It is very easy to use and much quicker when using it with pressable ceramics as it needs a shorter heat soak time in the furnace, enabling me to press more units in a day. It also sandblasted quicker and left a much better finish and fit than other investments we have used. As it is a universal investment I cannot wait to try it with alloys as well. Nanovest is almost half the price of the material I am currently using and I will only have to buy one investment - **Fine Art Ceramics, Nuneaton**
